Tags: **francis** **saint** **assisi**

Was looking for a good representation of St. Francis of Assisi and everywhere I looked I came up short. The main model is from a 3d scan of a bronze figure of St Francis of Assisi carved for the high altar of the Santo in Padua, made by Donatello circa 1447-1454. I added additional animals. If you want to modify the original to here's the the tinkercad file. <https://www.tinkercad.com/things/bk5ZsZMXkYR-st-francis-of-assisi->

Printed with Overture Easy PLA Rock Filament, 10% cubic infill, 20% density tree support, concentric ironing for the base, support angles at 60, on Ender 3 with Microswiss Direct Drive.
