Tags: [holder](#) [wallmount](#) [bedsheet](#)

I continue experimenting with the vase mode. For the contest, I made a bed sheet holder that can be mounted on the wall. Several times I selected the configuration of the model so that everything was printed, the sheets entered and left easily, but at the same time they kept well, I share the final version. I printed PLA, but I think any filament will do. For a model with a logo, the layer height is 0.15 or less, without a logo - any from 0.1 to 0.4. The line width is 0.9, 5-6 lower layers.

Good luck to everyone!
