Summary

I remixed the balance game box to add dividers for the base and stand and 4 different sets of playing pieces.

There are two different versions of the box insert depending on what you want. The version with the base piece in the middle has 4 equal component compartments around it, you can see in the picture that some of the pieces had to be placed in it upside down and fit in neatly to all fit well.

The second version has the base piece along the edge and the 2 middle component compartments are larger than the ones on the outside, this is more ideal if you have smaller components and larger ones.

I have also included the files for the inserts themselves if you want to mess around with it.
