Decorative star

Stars are popular decorations during winter festivities.

I was looking for one that was more decorative but my search came up empty.

The decorative element was a free wood carving design so it took some work to get it 3d printer ready. Meshmixer was helpful in this respect. Fusion 360 made creating the star an easy task. Windows 3d builder made the final fusion of the designs easy.

I printed the star and my wife used rub and buff to do the highlights.

I wish one program could do all these tasks but I haven't found one yet.
