Use the included .3mf which is pre-sliced for color changes and infill for a nice presentation. Choose a background color - first 3 layers print that color, recommend translucent colors. Then print the main body of the print in transparent/clear filament (non-colored) - and the last two layers are in a opaque jungle green, and transparent red to get the bows and berries.

Pull out the original glass from your porch light, and then insert this panel.

The .3mf file includes two shapes - one is the frosted panel, and the other is the holiday wreath. If your porch light requires taller/shorter/wider, resize the frosted panel, and reslice - the shape will not be impacted.

Merry christmas and happy printing!
