Hi all!

With all those amazing Christmas ornaments coming online, I needed some hooks to hang them on my tree.

Meet my recent project;

An online tool that generates Gcode to **print an ornament hanger in 1.5Sec!** Yupp, really.

Tired of clunky, wasteful ornament hangers that take way longer to print than they should? I was too, so I cooked up a speedy gcode generator that spits out your perfect hanger in less time than it takes to hum "Jingle Bells."

I have published the tool on my website for free. A bit like Santa's workshop, but for 3D printing. And guess what? I've got pre-sliced codes ready for download, so you can hit print and get back to sipping that cocoa in no time.

As the festive vibes roll in, let the 1.5Sec Ornament Hanger be your holiday helper. Say goodbye to printing headaches and hello to a season full of 3D-printed cheer. 'Tis the season to get crafty, so jump on board and let the printing party begin!

**Link to the code generator;**

[1,5sec-ornament-hanger – Voxel3D](#)

**Pre-generated gcodes;**

I have added pre-sliced gcodes to this page, but keep in mind these are conservative to be as universal as possible. Using the tool above will always be more specific and efficient.

**See the tool in action here;**

notes;

- The 1.5second (video above) was achieved with an Ultra-high-flow hotend. (rapido UHF)
- I cannot upload Klipper-specific gcodes on printables. For printers running klipper, please use the tool online.
