I replaced the original prusa filament spool-holder with the universal/modular spool-holder from @DsK_Printing_373735 and my own designed bracket (<https://www.printables.com/de/model/672930-spool-holder-bracket-for-prusa-mk4>).

It's now a single spool-holder and so I needed a filament guide for it and I designed this version.

I took one of the small silicon tube from the original prusa filament guide and pressed it in the hole from my new guide. you only need a slight amount of force to press in the tube but it is fixed well enough.

resolution: 0,2mm

infill: 20%

supports: yes, for the hole
