I made a set of Imperial drill depth stops for my father for Christmas, and decided it would be great to add a box to them for storage.

Print Settings

No Rafts, Support, or Brim needed

Resolution: 0.2

Infill: 10%

Walls: 3

Notes: This model uses as little material as possible, my print is in white, and you can see light through it, however it is strong.

Change Notes:

V1: I edited this model before publishing to have a better fitment, and remove the center posts. My initial print's tolerances were too tight (print shown), the drill stops just barely fit, and required sanding.

V2: Made some parts thicker and added clear markings to the lid as to what the tools inside are, and what sizes. The model itself is done in less parts, making it a little cleaner.

V3: I didn't like the sharp corners, so I rounded everything out. It made the model a little more complicated, but I think it's worth it, and saves some material.
