Summary

This is a model for a magical key for Santa to be able to get into your house if you don't have a chimney.

Tags: [christmas](#) [santa](#) [key](#) [skeletonkey](#)

This key is a magical key. It allows Santa Claus to be able to unlock your door, only he has the magic to be able to activate it.

It is a skeleton key with a Santa's helper as the main body of the key. You are able to string a chain or string through the model with the loop system.

The other model will let you stand the key up.

The teeth on the key are parts of a simple snowflake.

The gnome is from Body3D's gnome model, all of the other parts are added by me to adapt the model to a new use.

PLA is best to print with, it will need to have supports to help keep the proper shapes. There will also be slight clean-up needed when it is finished printing due to some minor stringing on the key head.

You may want to scale it down slightly to match a more realistic key size, original size may be slightly large.

I painted it with a sandable primer and then coated it in liquid gold leaf.

This remix is based on

Gnome (Supportless)
