Clips PTFE Chain

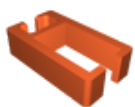

Unlike the rest of the clips I found, this one comes with the lower opening giving it a more aesthetic point, I also designed it a little thicker than the rest for a firmer hold. You have two models to choose from: V1: With top opening to insert the tube V2: Closed at the top for more security and aesthetically more beautiful, but to install this we will have to disconnect the tube to insert the clips.

I carried out my tests at 0.16 layer height with 3 walls, It is recommended to print in PETG at a minimum.
