updated 24. 5. 2024 | published 24. 5. 2024

Summary

I made this to hold tender and a fishing kit so I can carry it around comfortably. It also has some tools built in.

((UPDATED) I INCLUDED FILES THAT SEPARATE THE CLIP FROM THE CAP, YOU WILL NEED AN M3-16 SCREW AND LOCK NUT TO FASTEN THE TWO TOGETHER. THIS PREVENTS THE CLIP FROM SNAPPING DUE TO LAYER LINE ISSUES.)

I made this to hold fire tender and a fishing kit so I can carry it around comfortably. It also has some tools built in.

This tool can hold anything that will fit in it but was intended as a fishing and fire kit. In the pictures I have about 9 feet of high test line and this can be used to tie around the notches in the cap. The cap can then be used to retrieve anything that is magnetic.

On the bottom of the tool it has a quarter inch bit driver. This can be used in a pinch to tighten or loosen a screw. Depending on the material that you use to print with this, the bit holder may hold up longer or may wear sooner.

FOR THE "O-RING": The o ring isn't actually a proper o ring. I wanted to use a common item so people didn't have to go hunting or a specific measurement that may be expensive to I used the small rubber band hair ties I found at the dollar store. A picture of the brand I used is in the post.

This was made to fit into a medium leatherman pouch alongside a flashlight. I would advise making a sheath for it out of whatever material you like to keep it contained.

This is one of my first designs that I remade to fit better and is much stronger.
