Summary

A shelf for your weaving loom - velcro one or two onto your breast beam!

[Hobby & Makers](#) > [Other Ideas](#)

Tags: [shelf](#) [weaving](#) [shuttle](#)

This is a shuttle shelf for the Toika Eeva loom. Put one on the right and or left side of the breast beam to have a nice place to rest your shuttle if you're doing a two (or more) shuttle weave such as overshot, crackle or color and weave.

Use industrial strength self adhesive velcro to attach the shelf. This makes it easily removable for wider weaves and could be repositionable for narrower pieces. We highly recommend that you put the “loop” side of the tape on the beam and the hook side on the plastic “shelf”. This way, if you remove the shelf, the loop will not interfere with your yarn. For testing, we only put a relatively small piece of velcro on the beam. But now that it's been tested and works great, we're thinking about putting a strip under the beam and on the part away from you so that you can move your shelf anywhere you want on the beam.

You can print this without support with the bottom on the build plate or on end.
