I bought a bonsai tree and needed a humidity tray for it. I like a modern aesthetic and didn't see many models to choose from. I modeled this to be printed without support. The feet are connected with dowel pins to the base.

I printed a single dowel pin and adjusted the size a couple times to get it to fight right. I'd advise laying the dowel down on the bed to make it stronger. After I had the size right I printed the rest with a 3 line brim to hold them all down.

The base and feet were printed with 15% infill 4 walls and 5 top and bottom layers. I would probably print it with a bit less infill if I were printing it again, but to each their own.

I've included the Fusion 360 document if anyone wants to modify it to their liking.
