With the new library for the terrain generator (<https://cults3d.com/en/3d-model/game/dwarf-terrain-library>), I created some buildings for you. They could fit perfectly to models from tablehammer or other SciFi-styled dwarves (<https://cults3d.com/en/users/Tablehammer/3d-models>). Have fun!

All buildings are separated by levels, so you can print them mostly without support and glue the levels together. Printing full buildings is not recommended since a lot of support would be needed.

The terrain generator is a small tool that lets you define the size of the building/ruin, and the tool will fill this with the parts from the library. All other dwarf terrain releases from today were created with the generator suite. It is available as part of my full access patreon rewards, more info on the generator suite can be found here: <https://udos3dworld.com/generator.html>
