Summary

Very precise cable cover for Prusa MK4

Tags:  

I created a very precise cable cover for Prusa MK4. I love universal parts, so this model is usable for both sides of the MK4 frame. I adjusted all surface angles for every kind of (even unclear) cable routing and took care about the 2 screw heads of the display holder on both sides. Just click it in and slide forward for a nice fit. It took a few attempts to make the clip strong enough without being a pain in the a** to apply on the frame or even remove.
