Easy to make, a star rosette for honoring a winner.

The model requires no support but a brim is mandatory. Due to the extremely thin vertical pieces, it's recommended to print it very slowly (I used 20mm/s).

To assemble, just screw and tighten the back oval piece to the star while inserting the two halves of the frills skirt. The protruded center ring on the skirt should fit into the circular groove behind the star. A folded piece of ribbon with a hole may be fixed through the screw. Finally a piece of wire can be threaded through the holes on the oval piece for attachment.
