Niche Zero holder for Sage/Breville 58mm portafilter. Designed to stylistically match the grinder while still seamlessly integrating the stock dosing cup and holder.

It is an elegant way to grind directly into a portafilter with a Niche Zero grinder. There is also still enough space to fit any typical dosing funnels under the shoot.

If the stock dosing cup holder does not fit firmly into the holder, try rotating it around - mine is not exactly circular, so you need to find the optimal position.
