## Summary

A small cabel-organizer to easier coil up cables, so they don't tangle.

[Gadgets](#) > [Portable Devices](#)

The cable-organizer can be used with most charging cables (Apple cables are a bit to thin, but they work). I would recommend printing the plates standing on their sides, the pin for the hinge standing and the small holders standing aswell. Thats to ensure all runded surfaces get round. This requires some support material though. The holders can be printed in either TPU or PLA. Both work, but TPU is better. You can attach an apple wall-wart to the back of the organizer.
