Summary

Plunger keeper/flange extension. For MG Chemicals, specifically (though, it may work with others)

I kept dropping the plunger from my solder syringe, because MG Chemicals decided that a plunger that actually stays in the barrel is a thing of the past. So, I made a plunger keeper/flange extension. For MG Chemicals syringe, specifically, though, it may very well work with others. My print is the low quality setting in Cura for the generic SV06 profile.
