### Summary

Small stand for a laptop or tablet. Mounts to a tripod in place of the tripod head.

A small stand for your laptop or tablet. I use it for a Macbook Pro in front of my bike trainer. The recesses are for rubber pads that fit within the feet of the laptop.

The slots allow for different orientation relative to the feet. The through holes were setup for M6-1 screws that fit my Manfrotto tripod, but you may have to adjust the size and diameter for your tripod, it doesn't seem to be universal as it didn't match a Peak Design tripod's set screw holes.

- Printed with 4 layer wall thickness on top and bottom, and in a cylinder area around the mounting slots to increase strength
- Four rubber bumpers are 0.75" x 0.06", and are placed so they will fit within the feet of a current 14" Macbook Pro, or a 13" Macbook Air
