This is a fairly large Christmas card holder in the shape of a tree. Holds 15 cards.

I printed this on my K1 Max, with the Tree Base section maxing out my bed size. For smaller printers, I recommend splitting it vertically and adding in connectors to help you line everything back up for reassembly.

The pieces as uploaded all have alignment connectors to help reassembly, just apply some super glue to the female ends and hold the pieces together firmly for about 30 seconds.

Hanging can be done from a single nail inside the top of the star.

Please note: If you are going to use Silk PLA for the card holders, you need to really make sure your settings are dialed in for solid layer adhesion. Unfortunately I learned this the hard way and had multiple snap offs that required supergluing to resolve. With standard PLA I've had no issue with

snapping, but if you want to be more festive, just be warned about Silk PLA's layer adhesion issues!

## Model files

### cardholder.stl

☐ Print 15 of these. If you are using Silk PLA, ensure you have your settings tuned in first.
