## Summary

A tool to measure angles from 10 to 80 degrees in 5-degree increments.

This is a simple angle gauge for measuring the common angles of chisels, plane blades, wood turning tools, etc., to assist in grinding and honing the taper on these tools. It may have other uses wherever discrete 5-degree angle measurements are needed. I printed this in PLA but it would be practical in other filaments. I printed a single layer of contrasting color at the deboss layer to make the numerals stand out. I didn't put any fillets in the model and it printed fine for me.

### Print Settings:

- 3-perimeters
- 15% infill
- .2mm layer height
