Summary

Add the cherry-compatible key switch of your choice, a key cap, and a lanyard. Then you'll be clacking away!

Tags: [fidget](#) [keycap](#) [keyswitch](#)

Designed to be compatible with Cherry MX style key switches. Just add one of those, a key cap, and a lanyard.

It's recommended to use XDA form factor key caps, but others should work also!

The only overhangs are inside the hole where the lanyard attaches, but in our experience, no supports were necessary.
