UPDATE 12.27.23: Added a simplified version (Milwaukee Charge Mount 2 v8) which requires 62% less filament and significantly less print time.

Details:

Brackets (with tabs) fit mounting slots on Milwaukee M18/M12 combo charger (Model 48-59-1812). Each individual bracket has 2 mounting holes.

Included are .STL files for all brackets and can be mounted using wood screws (M6x20), or whatever suits your personal requirements or

preference. Choose either of the 'Combo' brackets OR the 'Center' bracket (alone) OR use the other brackets (Left, Right & Center) separately with 2, 4 or 6 holes, your call. Only the 'Center' and 'Combo' bracket connects to the charger itself. 'Left' and 'Right' brackets are simply for additional support (spacers) across the back of the charger.

Note: Tabs are a snug fit and will snap if forced. You may want to hit them with a small file or sandpaper for minor adjustments. Avoid over-tightening screws as PLA filament tends to be more brittle.

*Printed on AnkerMake M5C (0.4 mm nozzle - 220x220 mm bed).

Hardware:

M6x20 Wood Screws (x2 per bracket).

Suggested Print Settings:

Perimeters: **4**

Fill Density: **20%**

Fill Pattern: **Cubic**

Filament: **PLA**

Rafts: **No**

Supports: **No**
