### Summary

Pins to extend the frontpanel of the Corsair case outwards, to fit fans outside the front of the case.

I was forced to put my case fans in the outside the front of the case to fit the radiator with the graphics card in the Corsair iCue 220T case.

Therefore I built these clips. They snap onto the pins on the frontpanel and extend the frontpanel by about 5-6mm more to the front.

I took the panel cover off a couple of times already and they seem to be fairly solid.
