Summary

Allows Fractal North case users who have installed the Noctua NH-D15 CPU cooler to still install fans on the side

[Gadgets](#) > [Computers](#)

If you are using the beautiful Fractal North case and have installed the Noctua NH-D15 CPU cooler tower, you may notice you are unable to add your side fans because the factory shroud bumps into the bottom of the cooler.

With this you can still use your favorite 120mm fans, and with the staggered slots at top and bottom you can fit them almost anywhere.

Update 1: Moved the outer tab in a little, made it wider, and added slits to secure it with screws

Update 2: Added a third variant file that can fit 140mm fans if you just need a replacement bracket and fitment around a NH-D15 isn't an issue, such as an AIO cooler. I just stretched the top up 10mm and added another row of holes for the fan to screw into.
