This is a work in progress, the case could not fit on your phone.

For different reasons, I have trouble to test some of the phone cases I have designed. So that, I left the cases uploaded; in case anyone wants to help me testing them. I would really appreciate any feedback on the models. I will need:

- Photos of the phone with the case printed.
- The material you used, that could be PLA, ABS, PETG, HIPS or Nylon, but **not** flexible filaments.

- The exact model of your phone (for this one could be lmk200z, lmk-200, lmk200e, lmk200b, etc.)
- A description of how it fits. Once I have a tested ok model I will publish the final versions for rigid and flexible materials, of course crediting my testers.

For other phone cases check [this](#).
