Yet another random 3D printing tool holder! There are many like it, but this one is mine.

This is a 6" (150mm) square tool holder designed to hold the tools included with a Prusa MK3S+ as well as other useful tools for 3D printing. It's been designed to hold the following:

- 2x pliers/flush cutters
- 2x tweezers
- Prusa allen key set, in a removable allen key holder
- Prusa Phillips screwdriver
- Glue stick
- 4" scraper/putty knife
- Small wrench (5.5mm for M3 nuts pictured)
- Acupuncture needle
- Deburring tool
- Additional bins for other stuff

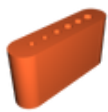

...Or, just put whatever you want that fits in the holes.

It works super well for me, so I figured I'd post it in case it helps someone else too.
