Summary

Just used the Plain version of steair and added a divider (Box) in PrusaSlicer.

[jewelerybox](#)

As already mentioned in the Summary I just added a divider to steair's plain ring box.

Nothing anyone else couldn't do, but I think it's also useful for others. It's just a 2mm thick box in the width of the box and heigth, so you can close the box.

Sometimes it's easier to search/find something finished then having to do it.

I also added a bigger box where the thickness of the divider is also 2mm, but the box is like this:

- X=175%
- Y=175%
- Z=200%

@steair If you want, you can download the 3mf and use it on your model page as well.
