I made a Philips Sonicare support with different options: standalone, with toothpaste, double wall support or with invisalign kit.

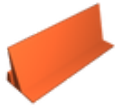

I added the invisalign kit just because I am currently using it and thought it might come in handy for someone else.

There are 3 options for the wall base: single with tape, single with screws or double with tape + screws (for better fit). I chose the double one and hid the screw holes behind my mirror.

The slide system can be used for anything else really, you just need to respect the dimensions for the base and the inserts in the rails.

I added some photos with the dimensions as well for anyone who wants to design their own shelves.
