### Summary

Very precise tool for Glock pistols (Glock 19 size slide), that allows removal and installation of sights.

Tags: [glock](#) [sight](#) [sights](#)

I tried to use other available tools but encountered some problems, especially during the installation of the new sights (the frame was too flimsy, and the pusher didn't allow the installation of new sights).

The tool has strong walls, and the pusher has an additional cut for a new sight (dedicated to DTF Analog Sights, but should work with others as well). One M10 bolt and nut are needed to use it.
