updated 7. 1. 2024 | published 7. 1. 2024

Summary

Hooks into the 30mm spaced shower rail. Rather simple to print since it consists of two parts

[Household](#) > [Bathroom](#)

I love Voronoi and we were missing some more space in the shower so I designed this little shelf.

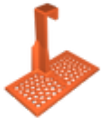

Hooks into the 30mm space between shower rail and wall. However, the model does not require tight tolerances so it should be scalable with the measurement tool in the slicer to fit at least 25-35mm as well.

Can be printed rather easily without supports preferably in PETG for durability. Simply glue the two parts together after printing. Ideally use some water resistant glue (I used superglue and it works anyway).
