Summary

Ornament using bridging to create a stringy effect

[Art & Design](#) > [Sculptures](#)

Tags: [vase](#) [ornament](#) [dna](#) [string](#)

Printed on my MK3S with a 0.4mm nozzle.

I used the 0.3mm draft profile, the only changes I made were to check 'detect thin walls' and to change 'seam position' to rear.

If when you slice the ornament with the above settings it says there are empty layers - try changing the height of the ornament a little or play with your layer height.

Any problems with the print - drop me a message here or on Twitter @3DPrintBunny
