### Summary

a thin disc added to the standard inserts, to use the honeycomb wall as a photowall.

I wanted to make a wall for my family photos. But they were all in different sizes and shapes. So I looked around and re-discovered the honeycomb wall. Unfortunately, I didn't find anything that could be used for photos. So I made some mine tweaks and here we are.

Either print the stand-alone discs, which you can insert on the fasteners before inserting them onto the wall,

or print the fasteners with the disc attached. it works both ways.

I'll update the pictures when I have an actual wall to show.
