Summary

Just a wall mount to keep your collar remote handy and nearby the door without losing it.

I know there are so very many “dog training” collars out there, I purchased this Jugbow one and my dog is very responsive to just the audio (<https://www.amazon.com/dp/B0CFX9F59C>) . I've never used vibration and the rubber caps are on the studs for the shocking portion. Anyway i wanted to make a way to store it near our front door.

Since there are so many options out there, i know the chances that this model is found by someone that has this are slim, but the dimensions are 53mm wide by 23mm deep (basically 2"x1") . so this could fit other remotes as well. The bottom has a hole cutout for the lanyard piece to slide through, but it also fits inside just fine with it not in the hole (shown in pictures above)

Printed mine standing upright directly on the build plate without any supports.
