IKEA Lillhavet is a nice enough drying rack, but it has only one bin for small things and two inexplicable empty spaces on both ends. So naturally, I designed two bins that go into these empty spaces.

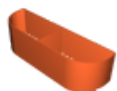

The OpenSCAD model is fully parametric. You can make the bins as high as you need and add as many compartments and you wish. The default model has minimal height and two compartments.

This model uses the [A2D library](#) for OpenSCAD.
