Summary

A simple sheath to cover the exposed blade of a JerryRig razor knife Will still allow blade to fold into the handle.

A simple sheath for a razor utility blade. I recommend printing it standing vertically upright and using a 5mm brim. In this orientation, you can resize the “thickness” for tolerance purposes.

I wound up resizing the thickness to 80% of original (= 2.88mm) and this gave me a good friction fit with the metal blade.
