## Summary

With this print and a lighter leash you can lift your droopy bowden tubes!

For those of us who have purchased a Bambu Lab A1, we know that over a short period of time the bowden tubes from the AMS lite will start to droop down in front of the printer. With this print and a modified lighter leash, or something similar, you can keep those tubes out of the way and completely free moving!

I recommend printing it standing upwards with the logo facing upwards, and using supports for a stronger loop on the top of the mount.
