Summary

Extension to raise the height of the NeaterFeeder Express

[Household](#) > [Pets](#)

NeaterFeeder Express was too short for my dog, but the company only makes an extension for the more expensive NeaterFeeder (\$80 + the extension), so I quickly threw this together in TinkerCAD to raise it approximately 6 inches off the ground for a better height match.

I did 6 top layers, 3 bottom layers, 3 walls, and 10% infill with just some old PLA I had. Could be better with the pieces curved to match that of the NeaterFeeder's feet, but it's rock solid and doesn't feel like it's going to fall over at all.
