Summary

Another weaponised Benchy to go with my other versions.

If You find this design useful, Please consider sharing a Make or leaving a comment. It's always good to see my efforts in use by others out there and it often inspires me to make improvements where I can. Without feedback I just draw a line under a design and move on to new projects.

F16 Benchy. It's a Benchy, with wings. Slots in nicely with my other Benchies. I did try adding the an air scoop, but no matter how I shaped or placed it, it kept giving it a silly face like something from Finding Nemo so I opted for a stock Benchy front.

When it comes to printing it? It obviously needs supports. I printed it just to test it out. The wings are thin, the fuel tanks are close to the wings, and the missiles on the wingtips are delicate so care is needed when removing supports., but it can definitely be printed just fine.

I stopped my support cleanup to do pictures before completing the removal of all the remaining material as I didn't want to break anything

before getting some photos. I needn't have worried as it all came off fine in the end. Though I would say take extra care around the wings when snapping supports off as they are the most delicate area of the print.

I did the test print as a fast print so I was genuinely surprised it turned out as well as it did.

Did I mention that it will need supports? :-)
