updated 17. 3. 2024 | published 17. 3. 2024

### Summary

Balance your pen (sharpies too!). Go ahead and wheel it around like you're driving the Indy 500! Prints w/o supports.

[penmount](#) [sharpie](#) [sharpieholder](#) [ballpen](#) [markermount](#)  
[fidgetpen](#) [desktopfidget](#) [penball](#) [penfidget](#)

Print in .2 layer height.

Prints in place, turn off supports. First use: Put a pen in and then firmly but gently move around to break the orb free.

P.S. The ball can also pop out (with a little force) to be tossed around.

V2! I made the pen hole go all the way through the ball :)

**Have Fun!**

Post your make, please!!!!!! I love to see them!

**pen-ball.stl**

**pen-ball-v2.stl**

☐ Pen hole goes all the way through the ball so it can be canted sharply and 'locked' in the base
