Created this simple bracket to fix the **oscillating** motion on my **Dyson HP01** Air Purifier. You can see in the images above the bracket that broke and accessing it from the bottom of the machine isn't too hard. However, the bracket itself is held onto the motor via a **C-clip**, but it can be removed with a small flat head if you don't have the proper tool.

Tools

- Metrix Torx Bits
- C-Clip Pliers (or a small flathead to pry it off)
