

## Tremor V2 Remix: Badger

humming

[VIEW IN BROWSER](#)

updated 29. 2. 2024 | published 29. 2. 2024

### Summary

Raised shock mount points, shorter and lowered battery tray, limiting strap mounting features. Remix of Tremor ChassisV2

[Hobby & Makers](#) > [RC & Robotics](#)

Tags: [chassis](#) [axial](#) [axialscx24](#) [scx24](#) [tremor](#)

I wanted to build a version of the tremor that had more clearance for shocks to be vertical without binding, and @Depep1 was kind enough to include the fusion files in his original.

2/29/2024 update - Added Step file as well as solidworks assembly and part files (together as a single Zip). I didn't create the original model, so the solidworks assembly is very rough in it's architecture, don't judge me!

Hood:

Notch added to clear servo connector and features added for limiting strap.

Roof:

Vents deleted, features added for rear limiting strap.

Battery tray:

Shortened and rear mount point deleted.

Thinned in order to lower ESC 1.5 mm for additional clearance of wires.

Sides:

Rear lower body line raised

Rear windows deleted

Rear shock mounting points added

Front lower body line raised.

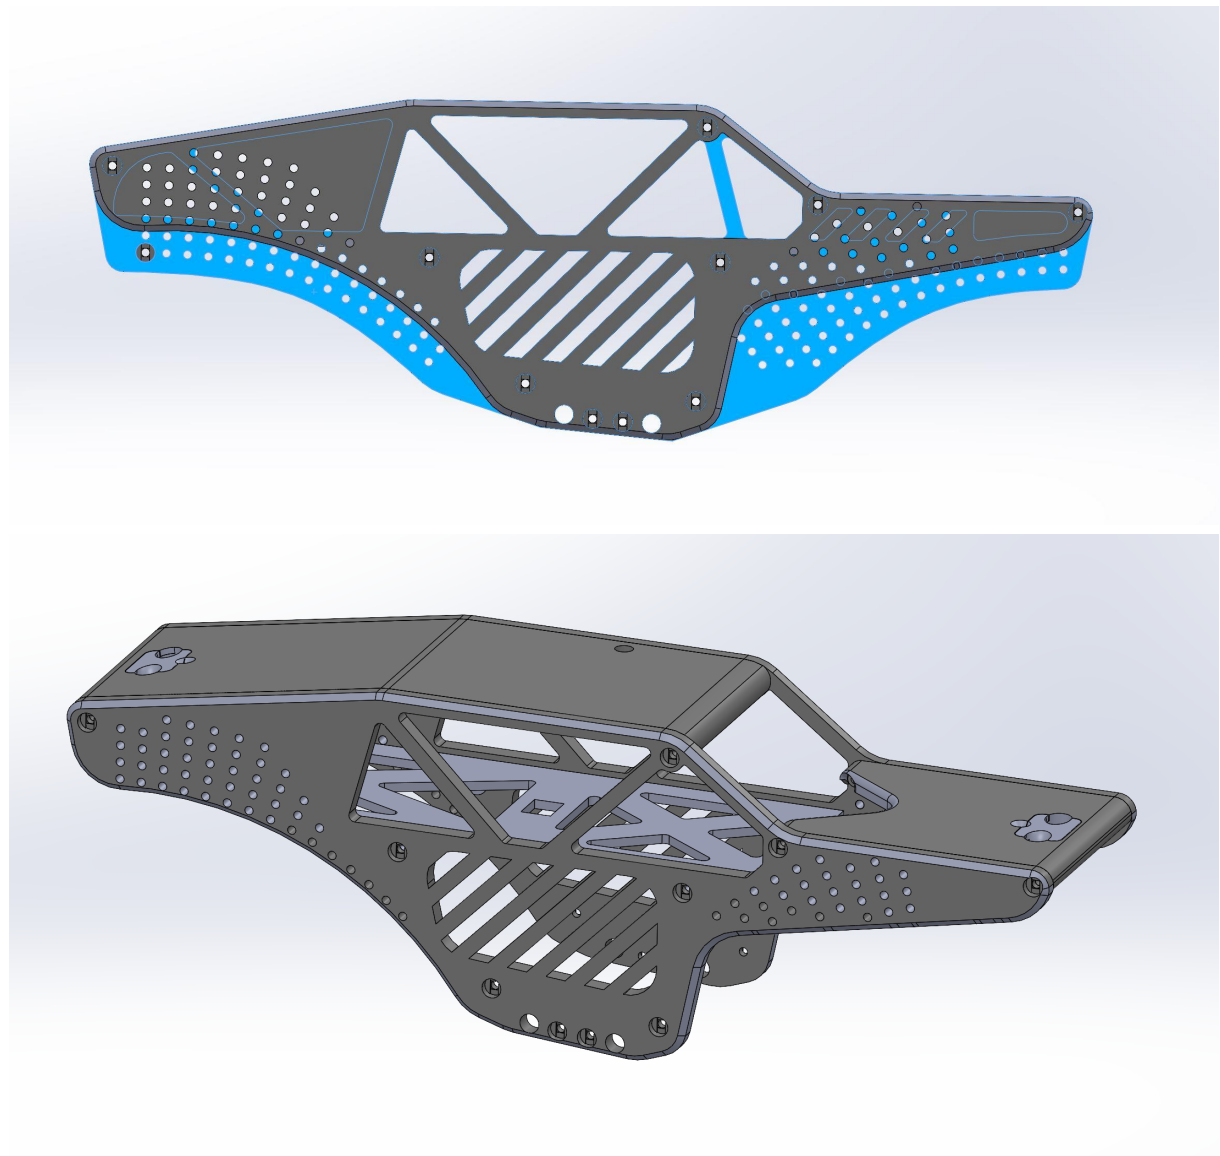

Front shock mounting points added.

Fender vents Deleted.

2nd pillar from front deleted to improve access to ESC power switch.

Added limit strap clips.

Roofline and transmission mount / skid line remain unchanged. The blue highlighted areas are removed on this remix.
