### Summary

Helps get accurate measurement from BB to seat

[Sports & Outdoor](#) > [Outdoor Sports](#)

This little widget pops into your crank bolt (assuming it has an 8mm hex) and features a slot on the outside for your tape measure to bite into. It helps you get a highly precise measurement of seat height (in combination with something like one of the 80mm finding tools available).

Print in any material you have, it's not a stressed part.

100% my own design but inspired by something I saw somewhere - apologies if the idea was yours!
