Perfect for the bath tub!

Print: .2 layer height // I used 2 walls and 15% infill and stood on it without breaking... I'm 200 lbs. (it's all Snail shell, I promise). Not bad for only 30 grams of filament.

The sphere will break free with a little firm love and rotate freely, to accomplish this go around the bottom of the ball and gently pry upward from the base. You should hear some light (and uber satisfying) cracking as the ball releases from the base, this is normal, continue until the sphere rotates freely.

Massage on, good friend, massage on.

Post your make, please!!!!!! I love to see them!
