Summary

USB covers for the PS5. I used layer change and super glue. Read the description below.

Most reliable way I found to make these is to have a filament change at layer 10 (If you work with 0.2 layer height).

There is a small hole for the USB pin where it belongs, I would strongly advise to super glue the pin to make sure it will not stay in the USB slot of your PS5, it would be a pain to get it out.
