updated 7. 1. 2024 | published 7. 1. 2024

Summary

Two types of covers are combined into one so as not to lose the cover for the small USB port.

Introduction

There are cables with Type A and Type C at each ends, but it is easy to lose them if the cover is in two pieces. So I simply combined the two covers into one.

Build info.

- Supports are needed. Ground the surface with round holes and use organic supports.

- I printed from PLA with 0.2mm layers.
