I couldn't find a suitable free tracer housing for my Airsoft guns so I designed my own. It fits an xcortech tracer down the end, so you can have extra barrel length inside the suppressor if needed.

I added some electrical tape around the tracer to allow it to friction-fit snugly without moving around inside the suppressor.

In the pictures, the white suppressor was printed as-is, and the black one was sanded and painted.

The threads are 14mm CCW (counter-clockwise).

No supports are needed, print the two pieces in upright orientation.
