Summary

Effortlessly keep your garden seeds sorted and accessible.

I put this little organizer together so I could keep my small but growing collection of seed packets for my garden in some sort of order.

Features:

- Tabbed dividers to allow sorting of herbs, leafy greens, fruit, and flowers.
- Simple lid (Not airtight, as seeds do like to breathe.)
- Small footprint.
- Very easy to print.
- Fits most seed packets.

I thought about labelling the tabs but felt I would have to make them quite large to make it readable, but that's not to say someone else couldn't if they wanted to.

Print Recommendations:

- Supports: None
- 10% infill
- 3 walls (the box and lid have a 1.2 mm thick wall.)
- .20 layer height with 0.4 nozzle for quick printing. (Looks much cleaner with .16 layer height and ironing enabled at the cost of print time)
- PLA / PETG
- Brim: 2-5mm recommended for the dividers.
