This print allows to you run cables (power, USB, audio, ...) on your profile and keep them hidden. Both versions clip onto the rig slots, no hardware needed.

It is very generous in space as I had a lot of cables to run. You can print multiple times to create a longer shroud or in different lengths by scaling the appropriate dimension.

You can then apply any decorative film on top. In my case I have three parts printed and then used a “carbon fiber” appearance sheet to hold them all together (cover photo)

You can print with only one side and top if you want an open side (photo 2)
